

Please **amend** the published claims as amended by Article 34:

**Listing of claims as published**

1. (original) An access device comprising:

means for communicating an impulse purchase selection to a service provider;

means for receiving an authorization key transmitted by the service provider in response to the impulse purchase selection;

means for receiving a program associated with the impulse purchase selection; and

means for processing the received program using the authorization key.

2. (original) An access device comprising:

means for indicating a desired impulse purchase selection;

means for communicating the desired impulse purchase selection to a service provider;

means for receiving an authorization key transmitted to the access device, and specific to, the desired impulse purchase selection;

means for receiving the transmission of a desired program associated with the impulse purchase selection;

means for processing the received program using the authorization key.

3. (original) The access device in claim 2, wherein the means for communicating the desire impulse purchase selection transmits the selecting via an out of band frequency.

4. (original) The access device in claim 2, wherein the means for receiving the authorization key receives the authorization key via an out of band frequency.

5. (original) The access device in claim 2, wherein the means for communicating the desired impulse purchase utilizes a two way communications interface.

6. (original) The access device in claim 5, further comprising means for generating a billing record in response to the receipt of the authorization key, wherein the billing record is transmitted via the two way communications interface.

7. (original) An access device comprising:  
a tuning and a communications unit for transmitting an impulse purchase message and, receiving an authorization key transmitted in response to the transmission of the impulse purchase message and associated with the impulse purchase program;

a controller and decoder unit responsive to the authorization key that formats a digital program into a video display.

8. (original) A method of providing a secure means for purchasing an impulse purchase program comprising the steps of:

communicating a message to a service provider means that indicates an impulse purchase selection;

receiving authorization information transmitted in response to the communicated message, and specific to the impulse purchase program;

receiving the impulse purchase program;

processing the impulse purchase program in response to the authorization information.

9. (original) The method of claim 8, wherein the communicating step comprises communicating the message via an out of band frequency.

10. (original) The method of claim 8, wherein the receiving step comprises receiving the authorization via an out of band frequency.

11. (original) The method of claim 8, wherein the communicating step comprises communicating the message via a two way communications interface.
12. (original) The method of claim 8, further comprising the step of generating a billing record and transmitting the billing record via the two way communications interface.
13. (original) A method of providing a secure means for purchasing an impulse purchase program comprising the steps of:
  - selecting the desired impulse purchase program;
  - communicating the desired impulse purchase program selection to a service provider;
  - responding to the communicated impulse purchase program selection by transmitting an authorization code uniquely associated with the desired impulse purchase program;
  - storing the authorization code associated with the desired impulse purchase program into a security module;
  - transmitting an impulse purchase program having an entitlement code associated with authorization code stored in the security module;
  - decoding the entitlement code;
  - comparing the entitlement code to the code stored in the security module to permit viewing of the impulse purchase program.
